

# Automated Transport Vehicle

**Michael Esposito - CS**

---

John Buchholz- ME

Kassidy Schmitz - ME

Sragvi Tirumala - BME

Camellia Zafar - EMSE

# Why use the ATV?

- Injury
- Too many items
- Items too heavy to carry

# Why are personal transport vehicles uncommon?

# Why are personal transport vehicles uncommon?

VS

# 3 Main Components

1

Robot Chassis

2

Cargo Enclosure

3

Tracking/Control  
Mechanism

# Challenges of User Tracking

- Identifying users
- Isolating target user
- Following target user

# Information Gathered and Processed

- 5 joints to classify users
  - X, Y, Z position in space
  - Shoulder width, mid-section height
- Previous locations
- User ID

# DEMO

# Visible Target User

1. Follow target user using center of mass point data
2. Calculate movement controls
3. Send to motors

# Target User Confusion

- May occur when:
  - user disappears from field of view
  - multiple users

1

2

2

# Confidence Values

- Start high, drop off quickly
- User quantifiers (last known location, joints) combined into single confidence value
- Utilized when ATV loses track of target user

# Helpful Tech

Visual  
Studio
